

Newcastle Street Orienteering

Did You Know #2 - HITMO (Hey, I Think It Missed One!)

If you believe that you went to a control but it didn't register in your MapRunF app, when you have finished you can let the organisers know by using the HITMO function in MapRunF.

1. From the main MapRunF screen select the "Show Results" button.
Your track from the event should be showing. Controls that are coloured green are the controls that have been included in your result.
2. From the Results screen press the (hamburger) menu at the top right of the screen.

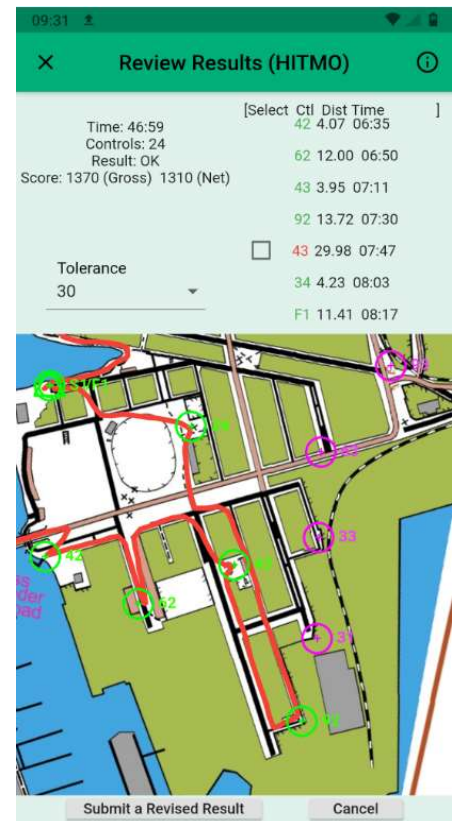

3. Select Review Results (HITMO).
You will see a list of controls that you passed within the Tolerance specified. The default setting for this tolerance is 30 metres. In this list the controls that are included in your score are in green. Controls that aren't in your score are in red. Pressing on a control in this list will centre the map on that control.

If you feel that a red control should be in your result press the Check box next to the control and then press the "Submit A Revised Result" button at the bottom of the screen.

Notes:

- If you don't see the list of controls on your screen it might be because you have the font size setting on your phone set to be too large.
- In the example shown, control 43 is shown in red. However this should NOT be checked since this was me passing control 43 on the way back past it. Control 43 has already been included in the results from when I went to the control on the way south to control 92.

The revised result that you have submitted will appear in the results with a "(Rev xx)" (where xx is the tolerance you used) next to your name. When the organisers go through the results they will make a determination (by looking at the trace of your run) of which one of your two entries to be your official result.
